C++ Setup Guide

C++ setup for Windows

Clang installation:

- 1) Download and run the msys2 installer from [link](#).
- 2) Open the msys2 terminal and run the following commands to install clang:

```
pacman -S mingw-w64-x86_64-clang
```

```
pacman -S mingw-w64-x86_64-clang-tools-extra
```

- 3) Add the path: C:\msys64\mingw64\bin to the system variables Path.

VS Code Installation:

- 1) Go to <https://code.visualstudio.com/download>
- 2) Download VSCode for Windows and run the executable.

Compiling and Executing code on terminal:

To compile and execute hello.cpp, run the following commands:

```
clang++ hello.cpp -o hello
```

```
.\hello
```

C++ setup for MacOS

Clang Installation:

Run the following command to install the command line developer tools, including Clang:

```
xcode-select --install
```

VS Code Installation:

Download and Install VS Code from [link](#)

Install C++ extension in VS Code:

Open VS Code and go to the Extensions view by clicking the Extensions icon on the Activity Bar on the side of the window or by pressing "Ctrl + Shift + X".

Install the Microsoft C/C++ extension and Code Runner extension.

Compiling and Executing code on terminal:

To compile and execute hello.cpp, run the following commands:

```
clang++ -o hello hello.cpp  
./hello
```

Configure VS Code:

The first time you run your program, the C++ extension creates tasks.json, located in your projects .vscode folder. Choose "C/C++: clang++ build and debug active file" from the list of detected compilers on your system. This will set clang as the default compiler in tasks.json file.

```
"tasks": [  
  {  
    "type": "cppbuild",  
    "label": "C/C++: clang++ build active file",  
    "command": "/usr/bin/clang++",  
    "args": [  
      "-fcolor-diagnostics",  
      "-fansi-escape-codes",  
      "-g",  
      "${file}",  
      "-o",  
      "${fileDirname}/${fileBasenameNoExtension}"  
    ],
```

C++ setup for Linux

Clang Installation:

Run the following command to install the command line developer tools, including Clang:

```
sudo apt install clang
```

VS Code Installation:

Download and Install VS Code from [link](#)

Install C++ extension in VS Code:

Open VS Code and go to the Extensions view by clicking the Extensions icon on the Activity Bar on the side of the window or by pressing “Ctrl + Shift + X”.

Install the Microsoft C/C++ extension and Code Runner extension.

Compiling and Executing code on terminal:

To compile and execute hello.cpp, run the following commands:

```
clang++ -o hello hello.cpp  
./hello
```

Configure VS Code:

The first time you run your program, the C++ extension creates tasks.json, located in your projects .vscode folder. Choose “C/C++: clang++ build and debug active file” from the list of detected compilers on your system. This will set clang as the default compiler in tasks.json file.

Please ensure that submission guidelines mentioned in the problem statement are followed properly and the code follows the build environment specified to prevent entry disqualification.
